

PHOENIX MARINE SOLUTIONS AND ALPHA MARINE CONSULTANCY WORK TOGETHER WITH THE STEALTH BOAT PROJECT

Phoenix Marine Solutions worked closely with Alpha Marine Consultancy to design and manufacture the hydraulic solution for the new Stealth Project, to be released in early 2011. The unique canopy lift system enables the canopy to lift and then slide forward to gain easy access for the pilot and crew, or owner and guests to be seated in the cockpit of this radical new concept vessel.

The Stealth Boat is a new semi custom vessel that has multiple applications and an exclusive look that cannot be found anywhere else in the world.

Stealth 710 can have many different power configurations from an outboard motor to a gas turbine jet drive depending on operational requirements. This is a fabulous superyacht toy, unique in its design and advanced capabilities. All electrical circuits are powered from a single finger print recognition device mounted on the helm to prevent the craft from being used by anyone other than qualified personnel.

Phoenix have been designing and manufacturing innovative and unique hydraulic solutions to the marine industry since 1981. Phoenix have recently partnered with Alpha Marine Hydraulics to provide products, solutions, service and support to Superyacht owners in the Mediterranean.
